5
10 Produce is harvested and de-cored in a field where they are
grown. The de-cored produce is loaded in totes and transported
to a processing facility. The processing facility includes a
washing device that immerses the de-cored ends of the produce in
15 a tank of washing fluid (e.g., a cleaning solution that includes
anti-bacterial agents). In one embodiment, a flow of washing
fluid is directed through the de-cored end of the produce and
out a leafy end of the produce while the produce is still loaded
in totes. A washing device having a tank and a transport
20 mechanism that moves totes loaded with de-cored produce into the
tank. Optionally, a device such as a pump maintains a flow in
the tank in a direction toward de-cored ends of produce.
